South is the strongest region for deeper expansion analysis

Regional opportunity report | Synthetic 2025 demand data | Multi-KPI ranking

Executive Summary

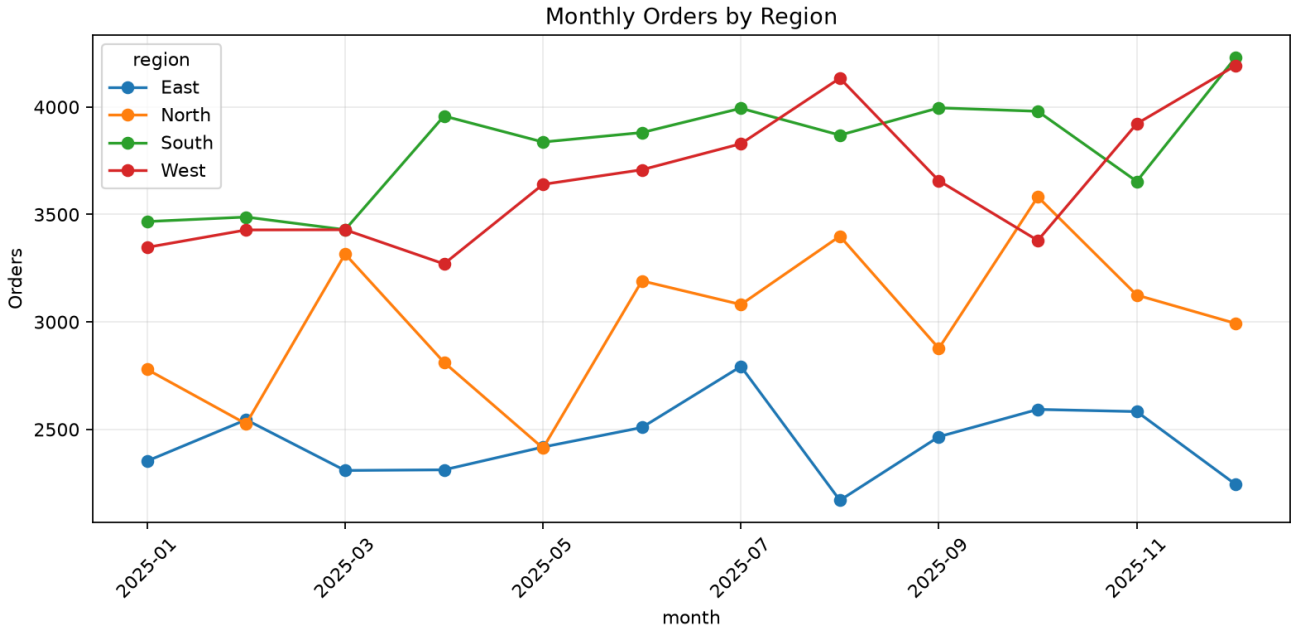

South	45.8k	4.2%	4.20/5
TOP OPPORTUNITY	TOP-REGION ORDERS	TOP CONVERSION	AVERAGE RATING

- South ranks first because it combines the highest annual order volume (45,784) with the strongest average conversion rate (4.2%).
- West is the closest alternative, scoring 93.6 against South's 100.0.
- The opportunity score is directional: it compares demand and conversion but does not include expansion cost, margin, capacity or competitive intensity.

Decision Context

The project tests how a small set of commercial and customer KPIs can be combined into a transparent regional ranking. The score is useful for prioritising deeper investigation, not as a stand-alone investment decision.

South leads demand and conversion throughout the year

Rank	Region	Orders	Conversion	Rating	Score
1	South	45,784	4.2%	4.20	100.0
2	West	43,936	3.8%	4.14	93.6
3	North	36,094	3.4%	4.17	80.2
4	East	29,295	2.7%	4.20	64.8

Recommendations

- Advance South to the next evaluation stage and validate unit economics, operating capacity and city-level demand.
- Keep West as a comparison market because its demand is close to the leader and may offer better costs.
- Run sensitivity tests with alternative weights and add margin, fulfilment cost and market competition before final selection.

Method and limitations

The demand index scales each region's total orders to the highest region. Opportunity score equals 55% demand index plus 45% normalized conversion. Ratings are reported but not included in the score. All rows are synthetic portfolio data.
