Retail revenue peaked in September, led by the South

Sales performance report | Synthetic 2025 retail data | Python, Pandas and Matplotlib

Executive Summary

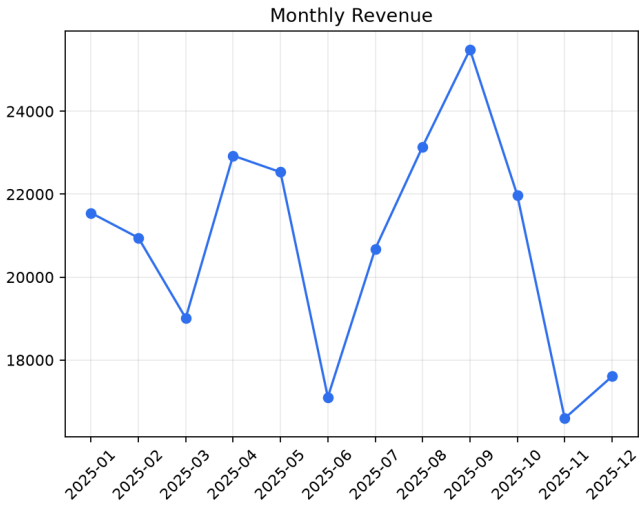

249.6k	900	277	South
TOTAL REVENUE	ORDERS	REVENUE PER ORDER	LEADING REGION

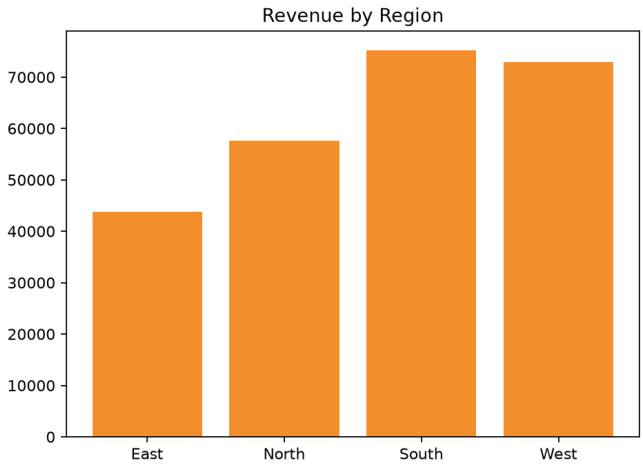

- The synthetic retail portfolio generated 249.6k in revenue from 900 orders during 2025.
- South led regional revenue with 75.2k, while Electronics was the strongest category at 125.5k.
- Monthly revenue peaked in 2025-09 at 25.5k; the lowest month was 2025-11 at 16.6k.

Business Context

Management needs a compact view of sales momentum, geographic performance and category mix. The analysis converts transaction-level records into three decision-oriented views: monthly revenue, regional contribution and category contribution.

Revenue is concentrated in the South and West

Regional and category performance

Region	Revenue	Share
South	75.2k	30.1%
West	72.9k	29.2%
North	57.6k	23.1%
East	43.8k	17.6%

Category	Revenue	Share
Electronics	125.5k	50.3%
Home	50.3k	20.1%
Fashion	47.9k	19.2%
Office	26.0k	10.4%

Recommendations

- Protect momentum in South and West with region-level inventory planning and weekly revenue monitoring.
- Use Electronics as the anchor category, but test bundles that lift lower-performing categories without relying on blanket discounts.
- Investigate the difference between 2025-09 and 2025-11 using campaign, stock-out and traffic data before attributing the gap to seasonality.

Method and limitations

Revenue equals quantity multiplied by unit price after discount. Results are grouped by calendar month, region and category. The dataset contains synthetic records generated for portfolio demonstration; conclusions show analytical technique and should not be interpreted as real Tata or client performance.
