December revenue reached a new high, but conversion softened

Executive performance report | Synthetic monthly KPIs | 2025

Executive Summary

251.4k	2,740	4.1%	4.31/5
DECEMBER REVENUE	DECEMBER ORDERS	CONVERSION RATE	SATISFACTION

- December revenue reached 251.4k, up 8.8% from November, while orders increased 5.1%.
- Conversion declined 7.0% relative to November, showing that traffic growth contributed more strongly than conversion efficiency.
- Customer satisfaction recovered to 4.31/5, an increase of 4.1% from November.

Management interpretation

The commercial result is positive, but the conversion decline is a useful guardrail. Leaders should distinguish revenue growth caused by more visitors from growth caused by a more effective purchase journey.

Revenue and orders finished the year at their highest level

KPI	November	December	Change
Revenue	231.0k	251.4k	8.8%
Orders	2,608	2,740	5.1%
Conversion rate	4.4%	4.1%	-0.31 pp
Customer satisfaction	4.14	4.31	+0.17

Recommendations

- Review traffic source mix and checkout funnel steps to explain why conversion decreased while orders and revenue increased.
- Keep revenue, orders, conversion and satisfaction together in the monthly scorecard so growth is assessed with customer and efficiency guardrails.
- Set targets only after establishing a longer historical baseline and confirming seasonality; one month-over-month change is not enough.

Method and limitations

Revenue equals orders multiplied by average order value. Conversion equals orders divided by website visitors. Month-over-month changes compare December with November. All monthly KPI data is synthetic and demonstrates reporting technique rather than real business performance.
